ALHO

MODULAR BUILDINGS

The name ALHO stands for Albert Holschbach, the founder of our company.

ALHO's corporate colour is forest green (RAL 6029), Albert Holschbach's favourite colour and at the same time a homage to the rural, densely wooded region around our company headquarters in northern Rhineland-Palatinate.

As a premium brand, the ALHO brand stands for highest quality, solidity, trust and experience.

Fixed costs. Fixed dates. Finished fast.

Welcome to room factory

The employees of the early shift and administration at the Friesenhagen site

“Reliability, partnership and last but not least, consistent customer orientation characterise ALHO. Then and now.”

Albert Holschbach

Our values are from yesterday. And that's a good thing. Because as a modern family business, we stand for fairness, honesty and reliability in our dealings with customers, employees and service providers - even today, in times that are becoming ever faster. Since our beginnings as a pioneer in modular construction, these basic values have successfully guided us every day.

Satisfied customers

We want to offer our customers the best possible benefits by providing them with competent and individual advice, by being a reliable partner and by convincing them with our service and support. We are committed to complying with the relevant laws and regulations and live a quality and occupational safety management system.

Competent employees

Over the decades our traditional company has grown steadily: Starting with five employees, now over 1,100 employees give their best for ALHO every day. We take responsibility for the satisfaction and personal appreciation of our employees, so that we are an attractive employer and training company.

Reliable partners

We work together with our suppliers and subcontractors on a partnership basis and communicate openly and fairly. In terms of joint quality assurance and customer satisfaction, we would like to continuously develop and improve our processes with our partners.

At home in system construction

The ALHO company premises in 1967: Cartwright's workshop on a yard with a single-family timber-framed house

From a manufacturer of construction trailers to a specialist in modular construction: we are one of the pioneers of serial construction. What politics, interest groups in the construction industry, architects and builders propagate as the future of construction has been a reality for us for over 50 years.

It all began in 1967 in a small cartwright's workshop in the yard of a single-family timber-framed house. Here, living, office, sleeping and toilet trailers as well as wooden barracks for the construction industry were produced. In just a short time, our production programme established itself in the market and was delivered to large construction sites all over the world.

In 1971 we started with the production of standardized room containers. Sound and thermal insulation also became more important on the construction site. With our products, we proved that standardised mobile room units and the desire for comfort are no longer mutually exclusive.

Container systems are now produced within the ALHO group of companies by our sister company ProContain and sold and rented by FAGSI.

Over time, stationary and thus durable solutions based on room modules increasingly expanded our production program and module construction developed.

Today modular construction is at least equal to conventional construction methods in terms of quality and durability. Resistant as „brick on brick“, „module on module“ is much faster and more flexible. Modular buildings are a sustainable and clever alternative to conventionally constructed buildings.

Dimension of ALHO Room Factory

331.650 m²
Total production area

The ALHO room factory in Friesenhagen today

With around 1,100 employees, five production sites in Germany, France and Switzerland, ten branches in Germany and sales offices in Belgium, France, Luxembourg and Switzerland, we are one of the market leaders in the industry.

Since our company was founded, over 320,000 system units have left the ALHO room factory. This means the production of 12,000 modules per year or more than 200,000 square metres of built-up area.

The faces of our employees in the personnel marketing campaign

You can rely on us.

For our employees. For our company. For society. As a major employer, we are strongly committed to the people in this region and at our other locations. We advise, support and develop every single employee on his or her personal and professional path. Only in this way can we recognise individual potential and grow together. We offer our employees attractive benefits such as e-bike leasing, a bonus card or employee events.

Education, further education and training

Every year young people start their commercial, industrial-technical, IT or marketing training with us. Only with employees who are willing to learn can we look forward to a successful future - which is why we support each one individually.

Management-programme

Selected employees are given the opportunity to develop their leadership potential as managers at ALHO in a one-year programme. The focus is on personality development and personal horizons.

Operational health management

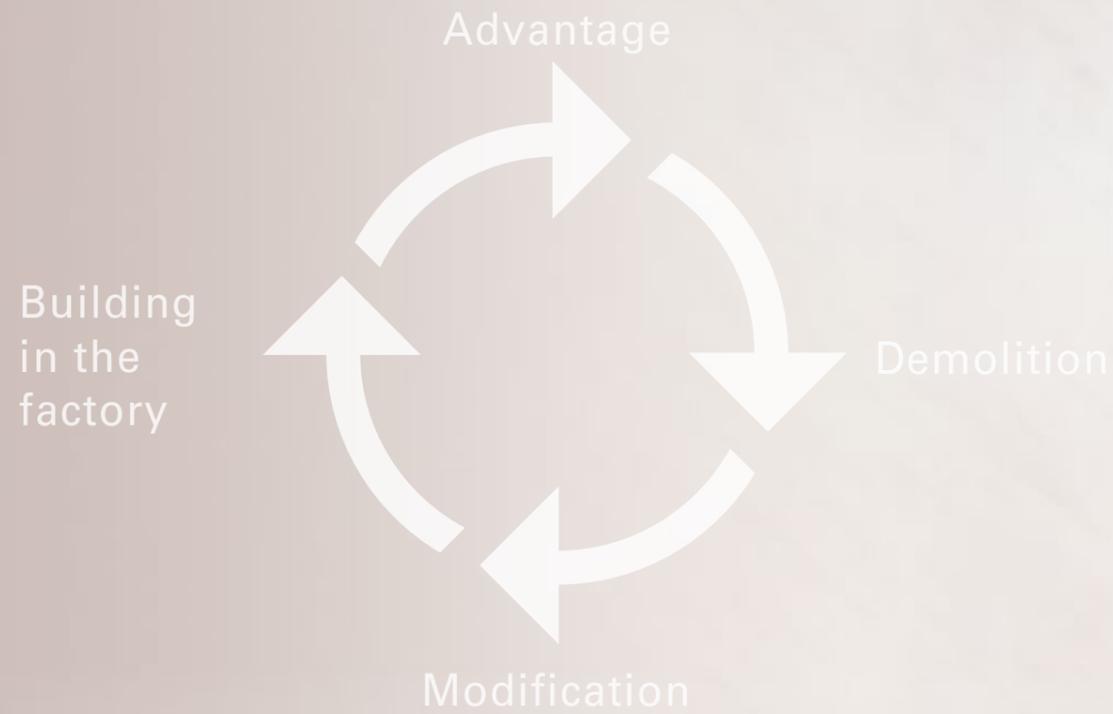

Under the brand „VitALHO“, we continuously offer health management measures, such as annual health promotion offers, ergonomics checks, the optimisation of workplace conditions and the organisation of health days.

ALHO Foundation for the well-being of young people

With our foundation, we support the Don Bosco Foundation Centre, which is committed to youth and educational work at home and abroad.

Sustainable buildings – for the world of tomorrow

Our building solutions contribute to a more sustainable use of resources

We support the values and principles of the German Sustainable Building Council (DGNB) and would like to offer sustainability in construction, by being a member. Our construction system has received the DGNB multiple certificate in gold as proof of sustainable building.

Our modular design is based on the unrivalled qualities of the sustainable material steel.

Hardly any other building material is so well suited for sustainable building. The low demand for primary raw materials conserves the natural resources of our earth and relieves the environment.

The sustainability of a module building can be documented over its entire life cycle. In the serial production of modular buildings, resources are sustainably conserved through exact material calculation.

During the operation of the buildings, optimized energy concepts and the use of renewable energies ensure low operating costs and protection of the environment.

The possibility of converting and demolishing modular buildings is also an important aspect of sustainability. All materials can be recycled up to 100% and returned to the material cycle.

Ecological quality

Steel, as the basis for modular building construction, is a renewable building material with a closed material cycle. It can be recycled up to 100%, which guarantees the sustainability of our resource management.

The serial production in ALHO room factory

The future of building ...

Mies van der Rohe's idea of industrial building, the reduction of time and material, has been a reality in our modular building for 50 years.

Our goal is to develop, manufacture and deliver products that are environmentally friendly, energy efficient and highly future-oriented, thus offering our customers a long-term investment.

With standardized processes as well as systematized and catalogued solutions, we enable our customers to achieve reproducible quality and highly economical building concepts. Using the latest IFC technology, building structures and attributes are digitally mapped and optimally planned from the very beginning. As part of lean management, we strive for continuous standardization and optimization of all processes.

"The future of building lies in automation and typification. Serial production in the construction industry will be unavoidable in the future."

Albert Holschbach

The module assembly of the Federal Employment Agency, Employment Agency in Cologne

... is reality at
ALHO.

Our buildings are produced in modern production halls as ready-to-assemble room modules regardless of weather conditions and are assembled cleanly and quietly on the construction site to form the module construction. From energy-efficient office buildings and sustainable buildings for education to sophisticated healthcare properties and attractive multi-storey residential buildings - we produce and construct modular system buildings as turnkey buildings according to the requirements of the respective building owner.

Work

- Office and administration buildings
- Canteens
- Social buildings

Education

- Kindergarten and day care centres
- Schools
- Universities
- Refectories

Health

- Hospitals
- Operating theatres and Surgery rooms
- Nursing homes
- Laboratories

Residential

- Apartment block
- Halls of residence
- Hotels

Our group of companies carries the brands ALHO, FAGSI and ProContain.

Realizing demanding construction projects in modular construction, solving temporary space requirements with container buildings, producing durable, robust system containers for trade and rental: Within the ALHO Group we cover all these requirements. The combined expertise and know-how of our group of companies benefits all brands - and therefore our customers.

ALHO

Construction of sustainable modular buildings as an alternative to solid construction

FAGSI

Sale and rental of high-quality container buildings as a temporary solution

ProContain

Supply of system containers „Made in Germany“ to container dealers and rental companies
